

Blue Horizons Multifunctional 200g Chlorine Tablets

Key Features/Characteristics

- 🔑 200g Stabilised chlorine tablets
- 🔑 Slowly erode over 3-5 days depending on water flow
- 🔑 Contains clarifier & algaecide
- 🔑 pH 3.0
- 🔑 Part of the  System

Ideal free chlorine range: 1 - 3mg/l (ppm)

Prior to using this product, adjust the pH levels to the ideal range of 7.2 – 7.6.

As this product releases chlorine relatively slowly it may be necessary to shock dose or oxidise prior to their use to first establish some chlorine more rapidly.

Application Instructions

WARNING – DO NOT ADD DIRECTLY TO A POOL AND ALWAYS USE A CLEAN APPLICATOR AS BELOW WITH NO OTHER PRODUCTS PRESENT.

Skimmer: Place one tablet in the skimmer basket per 45,450 litres (10,000 gallons) and adjust tablet numbers as necessary to take account of your water flow to achieve 1–3 mg/l (ppm) relatively consistently.

Floating Dispenser: Fill the Trichlor floating dispenser with tablets and adjust the aperture mechanism at the bottom of the dispenser to obtain the 1–3 mg/l (ppm) desired range. Alternatively keep the dispenser aperture constant and vary the tablets inside to achieve 1–3 mg/l (ppm). The dispenser should be removed from the pool while swimmers are bathing.

Chlorine Feeders: Few feeders take this 200g tablet and the 20g smaller tablet may be required. However, if appropriate, fill the dispenser and follow feeder instruction manuals on flow regulation to maintain 1–3 mg/l (ppm) chlorine levels.

Note: It is recommended that you periodically (e.g. weekly/fortnightly) shock or oxidise your water, using Blue Horizons Pool Fusion, Granular Shock, Rapid Shock or Shock 'n' Flocc.
